

SECTION FOUR

The level of the new dietary ingredient in the dietary supplement. See 21 CFR § 190.6(b)(3)(i).

The distributor will market zinc carnosine as a new dietary ingredient and source of zinc in dietary supplement products at a recommended and suggested level of use of 75 mg per day. The daily consumption of this amount of the zinc carnosine dietary ingredient in dietary supplement products will supplement the diet with approximately 17 mg of zinc and 58 mg of L-carnosine.
